2. (Previously presented) A universal collar that attaches to a pump and, in turn, a container used in a dispenser having a keyplate, the universal collar comprising:

a body having a first flange and a second flange, wherein said flanges extend outward and are axially spaced from each other for receiving the keyplate therebetween, wherein said flanges are connected on a forward side of the universal collar by a vertically extending rib.

- 1 3. (Previously presented) A universal collar that attaches to a pump and, in turn, a container used in a dispenser having a keyplate, the universal collar comprising:
  - a body having a first flange and a second flange, wherein said flanges extend outward and are axially spaced from each other for receiving the keyplate therebetween, wherein at least one of said flanges defines a notch on a rearward side thereof for receiving a projecting portion of the dispenser.
- 4. (Original) The universal collar of Claim 3, wherein said notch is centered
   within said flange on said rearward side.

5. (Previously presented) A universal collar that attaches to a pump and, in turn, a container used in a dispenser having a keyplate, the universal collar comprising:

a body having a first flange and a second flange, wherein said flanges extend outward and are axially spaced from each other for receiving the keyplate therebetween, wherein said body includes a top edge, said top edge defining a locating recess for receipt of a projection on the container, said recess having a base and a pair of upstanding sides, wherein said sides are circumferentially spaced from each other for receipt of the projection therebetween.

- 1 6. (Original) The universal collar of Claim 5, wherein one of said sides extends
  2 perpendicular to said base and the other of said sides extends obliquely
  3 relative to said base.
- 7. (Original) The universal collar of Claim 5, wherein said top edge extends axially upward relative to said first flange and extends in a circular fashion to circumscribe a portion of the container.
  - 8. (Canceled).
- 9. (Previously presented) A universal collar comprising a hollow cylindrical collar having a first flange and a second flange extending at least rearwardly therefrom, and axially spaced to define a receiver clearance therebetween, wherein said flanges extend radially outward from said collar, each flange defining a notch that opens rearwardly relative to said collar.
